DETAILED ACTION

Response to Amendment

1. Applicant's arguments filed 4/24/2007 have been fully considered but they are not persuasive. The claims merely recite the steps of determination of at least one sequence of probability models, determination of a sequence of digital data strings, determination of a confidence index of acoustic alignment, calculation of the probability of observation, calculation of probabilities of production of a priori of all the models, analytical estimation of the average duration of occupancy, without any practical application being recited.
2. In order for a claimed invention to be considered statutory under 35 U.S.C. 101, it must be useful and accomplish a practical application. That is, it must produce a "useful, concrete and tangible result" (*State Street*, 149 F.3d at 1373-74, 47 USPQ2d at 1601-02). In the present case, independent claims do not produce a "useful, concrete and tangible result. As such, independent claims are directed to non-statutory subject matter. The dependent claims fail to overcome the 35 U.S.C. 101 rejection directed towards independent claims, and thus, are also directed to non-statutory subject matter.
3. Applicant is advised to amend the claims to include the step of converting a speech/audio signal into vector data for the system and/or converting the processed vector data resulted from all the processing steps in independent claims into speech/audio data.

Claim Rejections - 35 USC § 101

4. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

5. Claims 1-20 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

6. Claims 1-20 are drawn to a mathematical algorithm, per se. Claims to processes that do nothing more than solve mathematical problems or manipulate abstract ideas or concepts are non-statutory. If the "acts" of a claimed process manipulate only numbers, abstract concepts or ideas, or signals representing all of the foregoing, the acts are not being applied to appropriate subject matter. *Schrader*, 22 F.3d at 294-95, 30 USPQ2d at 1458-59. Thus, a process consisting solely of mathematical operations without some claimed practical application is drawn to non-statutory subject matter. In this case, the claims merely recite the steps of determination of at least one sequence of probability models, determination of a sequence of digital data strings, determination of a confidence index of acoustic alignment, calculation of the probability of observation, calculation of probabilities of production of a priori of all the models, analytical estimation of the average duration of occupancy, without any practical application being recited.
